PROFILE

Looking for a Product/People Management, Developer Relations or Engineering position. Living in Taiwan but can relocate (Europe/Asia).

#rust #product_design #performance #browsers

Firmware Engineer: Apr. 2021 - Present. Self-employed

Development of a firmware for nRF52 SoC. The firmware is developed in Rust. Notable features include: a dynamic loader (firmware runs sideloaded binary or bytecode), integration of lightweight VM (experimented with different small footprint languages), implementation of a simulator for Desktop, and custom BLE services implementations. All C & Rust.

EXPERIENCE AT MOZILLA (12+ YEARS)

I have been part of the Mozilla adventure since the early days (~2003), and have been involved in the development of Firefox and related projects since then.

Servo Foundation: Co-Founder — Oct. 2020 - Apr. 2021

As part of Linux Foundation.

Servo's mission is to provide an independent, modular, embeddable web engine, which allows developers to deliver content and applications using web standards. As a permanent Technical Committee member, I am responsible for all technical oversight of the project. The scope of the Project includes collaborative development under the MPL License supporting the mission, including documentation, testing, integration and the creation of other artefacts that aid the development, deployment, operation or adoption of project.

Staff Research Engineer: Servo & Mixed Reality — 2018 - Oct. 2020

As part of Mozilla Corporation. Worked on Mozilla experimental Mixed Reality browser (UWP/HoloLens 2/Android/GLES).

Mostly Rust and C++ code. Working on a Servo-based browser for Microsoft HoloLens 2 and Android. My job is to make Servo capable of rendering web pages and WebXR content on different platforms. This involves building the embedding layer between the native platforms (UWP and Android / GLES) and our Rust-based Web engine, Servo.

Research Engineer: Servo – 2015, 2 years

As part of Mozilla Corporation. Worked on an experimental browser based on Mozilla experimental engine Servo.

Mostly Rust and JavaScript code. I have created the project early 2015, leading to the creation of a team. My role was to synchronise the Servo engine team and the front-end team, to ensure the project would be shipped on time with the expected features. Beside project management, I've been focusing on performance, OSX integration, and porting Gecko browser APIs to Servo.

Engineering Manager – 2014, 2 years

As part of Mozilla Corporation. Managing 2 teams: the Firefox OS developer tools team and the Firefox Performance tools team.

Mostly JavaScript and C++ code. After bootstrapping the initial version of WebIDE (Mozilla IDE and developer tools for Firefox OS), and the proof-of-concept of the Firefox performance tools (measuring and exposing performance data from Gecko), my role was to manage the 2 teams and bring both projects to completion.

Firefox Engineer, tech lead – 2011, 2 years

As part of Mozilla Corporation. Building the new generation of developer tools for Firefox. Engineering, product and design.

Mostly JS, HTML, CSS, XUL and C++ code. Started with rebuilding the Web Inspector of Firefox, ended-up as the tech lead of the Firefox Developer Tools team.

Tech Evangelist – 2008, 3 years

As part of Mozilla Corporation. Spread the word about HTML5 and CSS3 before it was cool. Many talks. Spoke person (press). Blog & social media activity. Co-created hacks.mozilla.org.

Back then, HTML5 was not really well known. Web developers were unaware of the potential of HTML5, and the W3C was pushing for a competitive technology (XHTML2). My role was to spread the word about HTML5 (WHATWG), help the Gecko platform team prioritise features, and work with partners (especially for the HTML5 <video> tag).

SKILLS

I am proficient in front-end technologies (HTML/CSS/JS), C/C++/Rust languages and most of the native toolkits (GTK, UWP, Cocoa). I know how browser engines work. I have a versatile profile (embedding to frontend, performance to design) and am very adaptable (absolutely willing to learn new technologies).

Lived in Europe and Asia. I speak French and English fluently.
